Internet Research

Key Words

Internet browser	A piece of software used to view web-pages
Search engine	A website used to find information on the internet (e.g Google). It includes a search box to type in keywords.
Web-address and address bar	The name of a website, e.g www.iLearn2.co.uk or www.bbc.co.uk is the web address and this is typed into the bar at the top of the internet browser called the address bar.
www	Stands for World Wide Web and is often at the start of a web address.
Ranking	Results of an internet search are put into an order. You can change this ranking by using keywords in your search.

What do I already know?

- Understand how a web-page displays information in different ways; text, images, videos and interactive elements.
- Use a web-page to answer questions.

Quick tips

- Be specific by using keywords, for example using viking clothing will help us find information better than just typing vikings.
- Try putting speech marks around your search words to highlight the keywords and ask a question. E.g What “clothes” did “viking” men wear?
- Look out for the lock icon in the web address as these websites are more trustworthy.

 bbc.co.uk

- Use the ‘find on page’ tool of your internet browser to find keywords on the page.

Our Learning Steps

1. Internet searching

Understand how search results are selected and ranked and show awareness of different strategies for finding specific information.

2. Browsers

Understand the features of an Internet Browser.

3. Search engines

Use search technologies (different websites) to find specific pieces of information.

4. References

Reference the correct source of information.

5. Evaluating content

Be discerning in evaluating digital content.

6. Fake news

Check the internet for fake news by cross-referencing facts.
