Web Design

Computer Science

Key Words

Wordpress

This is the software used to make websites. It is not the only one but is one of the most popular and is used to make about 40% of all websites and blogs, including iLearn2.

Static page

A static page is a page on a website that does not change too much, such as welcome page. This is the opposite to a blog page, which shows the latest blog posts and changes more.

Theme

The theme is the overall look of the website. There are different themes to choose from. For example, the navigation could be at the top of the website or down the side based on the theme.

Header

The image or the title at the top of the web-page.

Sidebar

A column down the left or right side of the page where text, images or other elements can be added.

Widgets

An element which can be placed in the side bar, such as an image, text, calendar etc.

Navigation

The menu and sub-menu the visitor uses to move between the different pages.

Domain name

The link for your website, also known as a URL (Uniform Resource Locators).

What do I already know?

- Adjust slide size to mimic a phone/tablet size.
- Add text and images to a slide.
- Add icons and text to use as navigation.
- Duplicate slides to create multiple pages of the app.
- Create hyperlinks to create navigation.

Our Learning Steps

1. Homepage

Create a static homepage and choose a suitable theme for your website.

2. Title, headers and backdrops

Change the site identity to a suitable title, tagline and website icon. Upload a suitable header and/or background image.

3. Sidebar and widgets

Adjust the website sidebar and add suitable widgets.

4. Text and images

Add text and images to a page and edit them.

5. Adding content and navigation

Add multiple pages and edit the navigation, including sub-menus.

6. Feedback

Provide constructive feedback for your classmates' websites.
